

Free Antivirus

Betteroff Networks provides FREE Antivirus Protection for all web hosting accounts.

Features:

Always Up-to-date

Viruses emerge quickly. Plesk AntiVirus provides around the clock protection with multiple updates per hour during the times of outbreak. A 24x7 monitoring center constantly monitors new viruses and quickly responds. Over 100,000 virus definitions in the database (compared to 20,000+ for ClamAV) Multiple updates per hour when necessary.

Highest Reliability

100% Virus Detection as verified by Virus Bulletin independent tests. Plesk Anti-Virus not only detects the known viruses in its database but also provides detection of yet unknown viruses and modifications to existing ones.

Sophisticated Virus Analyzer

Plesk AntiVirus by Dr.Web features a sophisticated heuristic virus-analyser engine. This analyzer detects yet unknown viruses or unknown modifications to the existing ones that are not defined in the virus database. Designed to handle massive volumes of email messages without any delay in maildelivery - Dr.Web handles over 10 million mailboxes for one of the largest web portals in Europe.

Mature and Proven

Dr.Web is the result of fifteen years of Antivirus development. Dr. Web has proven itself to customers with its ability to detect 100,000+ viruses and with its heuristic analyzer engine in detecting unknown or polymorphic viruses.

Small Update Footprint

The typical update to the virus database does not exceed a few kilobytes. This small update footprint enables quick downloads of updates even during outbreaks, when connections and servers tend to be overloaded.
